HOW TO GUIDE DECK LITES...FOR A MINI MICRO SCOOTER®

Three easy steps to fit your Deck Lites. You will need a Philips screw driver for this. Take your Deck Lite out of the packaging and you will see that it attaches to the scooter deck in two ways, with an adhesive strip and a screw fixing, both of these should be used.

1. First make sure you have all the components. You should have:
 - a. Two metal brackets, with an adhesive strip, to attach the Deck Lites switch box to the scooter.
 - b. Two small purple boxes which are the on/off switch. These are attached to a strip of LED lights.
 - c. Four screws, two for each of the purple switch boxes. These are used to attach the switch box to the metal bracket.
 - d. Two A23 batteries.

Next put a battery into each of the switch boxes. Simply pull off the purple plastic lid and insert the battery as directed.

Use the screws to attach the bracket to the purple switch box. Simply place the screw through the hole in the bracket and then screw into the corresponding hole in the purple switch box. Make sure that you have the bracket the right-way-round, the raised end of the bracket should be at the same end as the on/off button on the purple switch box (see picture 1).

Picture 1

2. Next lay your scooter on to its side to attach the Deck Lite to the underneath of the scooter.

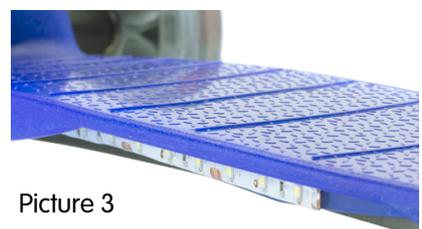

For a Mini Micro Scooter® loosen and remove the screws at the front of the underside of the deck (see picture 2).

Next pull the plastic backing off the adhesive strip on the bracket and get ready to stick it to the underside of the deck. Align the large hole in bracket, with the hole where you have removed the screw, stick the bracket to the deck and then put the screw back in.

Picture 2

3. Next peel off the plastic backing on the strip of LED lights, to reveal the adhesive strip and carefully stick these along the inside edge of the deck (see Picture 3) so that the LED lights are facing out sideways from the scooter.

Picture 3

That's it - you are now ready to Scoot in Style.

DECK LITES...FOR A MAXI MICRO SCOOTER®

Three easy steps to fit your Deck Lites. You will need a Philips screw driver for this. Take your Deck Lite out of the packaging and you will see that it attaches to the scooter deck in two ways, with an adhesive strip and a screw fixing, both of these should be used.

1. First make sure you have all the components. You should have:
 - a. Two metal brackets, with an adhesive strip, to attach the Deck Lites switch box to the scooter.
 - b. Two small purple boxes which are the on/off switch. These are attached to a strip of LED lights.
 - c. Four screws, two for each of the purple switch boxes. These are used to attach the switch box to the metal bracket.
 - d. Two A23 batteries.

Next put a battery into each of the switch boxes. Simply pull off the purple plastic lid and insert the battery as directed.

Use the screws to attach the bracket to the purple switch box. Simply place the screw through the hole in the bracket and then screw into the corresponding hole in the purple switch box. Make sure that you have the bracket the right-way-round, the on/off button on the purple switch box should be at the opposite end to the raised part of the bracket (see picture 1).

2. Next lay your scooter on to its side to attach the Deck Lite to the underneath of the scooter.

For a Maxi Micro Scooter® loosen and remove the screws in the middle of the underside of the deck (see picture 2).

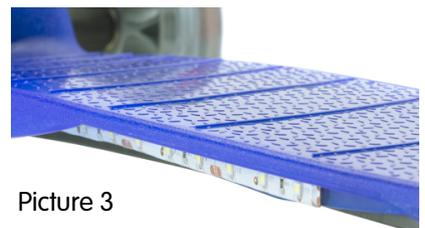

Next pull the plastic backing off the adhesive strip on the bracket and get ready to stick it to the underside of the deck. Align the large hole in bracket, with the hole where you have removed the screw, stick the bracket to the deck and then put the screw back in.
